Summary

DevOps Engineer with 2+ years running a production multi-tenant SaaS platform on **AWS and GCP** for US enterprise clients. Owned dev and staging end-to-end across 2 **EKS/GKE clusters** and 10 **containerized services**, with supervised production change access. Cut deployment time **40% (30 to 18 min)** rebuilding **CI/CD on Jenkins and GitHub Actions** with automated validation and rollback, and reduced non-production compute spend by **~60%** via Spot automation and right-sizing. Built MCP (Model Context Protocol) servers connecting Claude to Jenkins, Prometheus and the Kubernetes API for incident triage.

Technical Skills

Cloud: AWS (EKS, EC2, VPC, IAM, S3, RDS, ALB, ECR, CloudFront, Lambda, EventBridge, DynamoDB, SNS), GCP (GKE, Compute Engine, IAM)

Containers & Orchestration: Docker, Kubernetes (Helm, RBAC, HPA, StatefulSets, PVC, multi-namespace), ArgoCD (GitOps)

CI/CD & IaC: Jenkins, GitHub Actions, GitLab CI/CD, Vercel; Terraform (modular, remote state), AWS CDK (Python)

AI for Operations: MCP (Model Context Protocol) server development, Claude API integrations, K8sGPT, Gordon (Docker AI)

Observability: Prometheus, Grafana, CloudWatch, ELK

Languages & Tools: Python, Bash, Groovy, Git, Linux, Jira, Maven, SonarQube, JaCoCo

Professional Experience

CX-AID

Bedford, TX, USA (Remote)

Product: Nexolera — multi-tenant SaaS platform serving US enterprise clients on AWS and GCP.

Cloud/DevOps Engineer (Contract)

Mar 2024 – Jun 2026

- Owned development and staging for a multi-tenant SaaS platform spanning 2 **EKS/GKE** clusters and 10 containerized services — **Helm** releases, **RBAC**, **HPA** and namespace isolation — with supervised change access to production.
- Provisioned core **AWS** infrastructure (VPC, EKS, ALB, IAM, S3, ECR, EC2 Spot) and codified recurring patterns into reusable **Terraform** modules to make environment rebuilds repeatable.
- Rebuilt **CI/CD** on **Jenkins** and **GitHub Actions** with automated validation gates and one-command rollback, cutting deployment time 40% (30 min to 18 min).
- Designed **EC2** auto-recovery for instance failures and **Spot** interruptions and right-sized workloads, reducing non-production compute spend by ~60% with no loss in developer throughput.
- Built and integrated **MCP (Model Context Protocol)** servers exposing **Jenkins**, **Kubernetes** cluster state, pod events and **Prometheus** queries as **Claude** tools, letting engineers triage incidents in natural language rather than chaining **kubectl** and **PromQL** by hand.
- Deployed **K8sGPT** and **Gordon (Docker AI)** to auto-diagnose CrashLoopBackOff, image-pull and scheduling failures, turning raw logs into actionable fixes.
- Built **Prometheus** and **Grafana** dashboards and alerting for cluster and service health, cutting mean time to resolution 30% by surfacing failures ahead of user-reported tickets.
- Hardened the platform edge and storage via **CloudFront** routing rules, **S3** access controls and least-privilege **IAM** across tenant-isolated namespaces.

DevOps Intern

Sep 2023 – Feb 2024

- Containerized services with **Docker** and **ECR** and supported cluster and release operations; converted to a full-time contract role on completion.

Projects

AI-Augmented Multi-Account Incident Aggregation

AWS CDK, Python

- Built an event-driven pipeline on EventBridge, Lambda, DynamoDB and SNS that de-duplicates alerts across multiple **AWS** accounts, with ARN-based routing to Slack and Confluence; provisioned via **AWS CDK (Python)**.

Employee Management Platform — Kubernetes & GitOps

GKE, Helm, ArgoCD

- Deployed a 4-tier app (React/nginx, Spring Boot, Redis, MySQL) on **GKE** using Deployments, a **StatefulSet** with **PVC**, ConfigMaps/Secrets and a LoadBalancer Service; configured CPU-based **HPA** (2–10 replicas) with resource requests and limits and implemented **GitOps** via **ArgoCD** for auto-sync and self-healing.

ECS Fargate Infrastructure Automation

Terraform, AWS

- Provisioned containerized infrastructure (VPC, ECS Fargate, ALB, IAM roles) using modular, reusable **Terraform** with **CI/CD**-driven plan and apply.

Certifications & Education

- Certifications:** DevOps with Master AI — Skillfyme (6-month hands-on training) | Digital Engineering (Gold) — NASSCOM, 2023
- Education:** B.E. Electronics & Communication Engineering — SJCE (JSS STU), Mysuru, 2020–2024 | Diploma, Electronics & Communication — JSS Polytechnic, Mysuru, 2016–2019
